# Knitting Our Internet

As Internet lovers and adventurers, we are deep in all sorts of conversations about it. Being captured by compelling and thorny issues, it is terribly easy to forget that **most of the people out there still have no clue** about what we are talking about, and they still fully depend on mainstream, proprietary software and platforms for all their daily digital activities.

Let's **break free** from the abstract, self-absorbed, technical, intellectual, complex, whimsical, elitist approach to digital media critique!

Knitting Our Internet is a simple, practical, **participatory workshop** for normies of all ages and backgrounds about **how the Internet actually works.**

Created by a nerdy and enthusiastic terrestrial named Tommi, this workshop is a collective journey through the history of the Internet, and a choral, provocative envisioning of its future.

Antiuniversity, London

xHain, Berlin

Inter Alia Roots Winter School, Athens

SFSCON, Bolzano

The main purpose of the workshop is to uncover the ecological, political, social, and economical issues of centralization, exploring the value and the meaning of **decentralization**.

All the materials and info are freely available under CC-BY-SA 4.0 license, at **https://ournet.rocks**.
